

# AJPE RAISED CAM HEMI ENGINE

In less than a year, from concept to winning its first race in arguably the toughest Pro-Modified class on the planet...the all new AJPE Raised Cam Hemi engine combination proved that the design team at AJPE have created another winning engine package. Designed around a 4.800 bore space platform, the AJPE Raised Cam Hemi was created for engine builders & race teams with the highest standards in creating reliable power; the ability to remove the cylinder heads while leaving the intake manifold in place, and having a full inventory of parts available anytime throughout the racing season.
